

FRAMEWORK PURPOSE:

Runtime Governance evidence does not end when a legitimacy determination is made.

This framework defines how that determination becomes **independently verifiable** and **worthy of trust**.

1. WHAT MAKES EVIDENCE CREDIBLE?

The properties required for evidence to be relied upon.

INTEGRITY

Evidence cannot be altered without detection.

INDEPENDENCE

Verification does not depend on trusting the producer.

REPRODUCIBILITY

The determination can be independently reconstructed.

TRACEABILITY

Evidence remains connected to the execution it supports.

2. THE VERIFICATION PATH

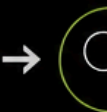

From determination to verifiable evidence.

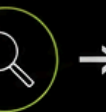

GOVERNANCE
DETERMINATION

EVIDENCE
(DECISION RECEIPT)

VERIFICATION

INDEPENDENTLY
VERIFIABLE

DECISION RECEIPT

The atomic unit of governance evidence.

⌚	Execution Event	⚡	Signal Freshness
👤	Authority Chain	🛡️	Governance Determination
🌐	Context Sources	💬	Reasoning Basis
🎯	Intent Reference	#	Evidence Identifier
⚙️	Evaluation Inputs		

Independent verification may be performed by auditors, reviewers, regulators, or automated systems.

3. EVIDENCE ASSURANCE LEVELS

Increasing levels of assurance.

SELF LOGGED

Produced and stored by the system.

SIGNED RECEIPTS

Cryptographically signed by the producer.

TAMPER-EVIDENT CHAIN

Immutable sequencing detects tampering.

EXTERNALLY ANCHORED

Evidence anchored to an external trusted source.

INDEPENDENTLY ATTESTED

Third-party attestation confirms accuracy.

4. IMPLEMENTATION PATTERNS

Architecturally independent.

INLINE ENFORCEMENT

Evaluate and record within the execution path before action.

INDEPENDENT ATTESTATION

Evaluate and record outside the execution path after the fact.

HYBRID

Evaluate inline and attest out-of-band based on consequence.

ARCHITECTURE INDEPENDENT

The governance discipline remains the same regardless of implementation.

5. WHY INDEPENDENT VERIFICATION MATTERS

ACCOUNTABILITY

Establishes who is responsible for the determination.

AUDITABILITY

Enables external review and compliance.

DISPUTE RESOLUTION

Provides defensible evidence during investigation.

OPERATIONAL TRUST

Builds confidence that autonomous execution is being governed.

GOVERNANCE LAW

PERMISSION TO **KNOW** DOES NOT, BY ITSELF, ESTABLISH AUTHORITY TO **ACT**.
A **DECISION** TO **ACT** DOES NOT, BY ITSELF, ESTABLISH AUTHORITY TO **EXECUTE**.
