

INFORMATION TO EXECUTION

WHY AUTHORIZED ACCESS AND WARRANTED ACTION

DO NOT, BY THEMSELVES, ESTABLISH EXECUTION LEGITIMACY.

REV 1.2

AUG 2026

AOI FRAMEWORK SERIES

FRAMEWORK PURPOSE:

Modern autonomous systems can acquire authorized information, carry that context forward, select actions, and cause consequential changes.

Permission to acquire information and a decision that an action is warranted **do not, by themselves, establish execution legitimacy.**

1 AUTHORIZED ACCESS

What information may be acquired?

Permission to acquire information does not, by itself, establish authority for subsequent execution.

2 OBSERVED INFORMATION

What information informs reasoning?

Information becomes part of the execution context. Its source, sensitivity, and governing constraints may remain relevant downstream.

3 ACTION SELECTION

What action is proposed or selected?

Information can support many actions. A decision is not authority.
Inherited context may constrain what may happen next.

INFORMATION

AUTHORITY

DECISION

INHERITED CONTEXT

EXECUTION AUTHORITY

4 EXECUTION LEGITIMACY

Does this specific execution remain a legitimate exercise of conferred authority now?

Evaluated under Execution Legitimacy (FW-004)

5 CONSEQUENTIAL EXECUTION

What consequence is produced?

Governance Evidence records the legitimacy determination.
→ FW-005

The action causes a system or real-world effect.

DISTINCT GOVERNANCE QUESTIONS

INFORMATION

What does the available evidence indicate?

ACTION

What action is warranted or selected?

AUTHORITY

Is the executing actor legitimately empowered to cause it?

EFFECTUATION

What consequence is actually produced?

These functions may occur together, iteratively, or across different systems. Their governance questions remain distinct.

OUTCOME MATRIX

INFORMATION	ACTION	EXECUTION LEGITIMACY	RESULT
✓ Properly Accessed	✓ Sound	✓ Established	Legitimate Execution
✓ Properly Accessed	✓ Sound	✗ Not Established	Do Not Treat as Legitimate
✓ Properly Accessed	✗ Poor	✓ Established	Legitimately Authorized, Poor Decision

Authority validation does not establish decision quality.
Decision quality does not establish execution legitimacy.

KEY DISTINCTIONS

ACCESS ≠ EXECUTION AUTHORITY

Permission to access a resource does not, by itself, establish authority to cause a downstream consequence.

DECISION ≠ AUTHORITY

A judgment that an action is warranted does not, by itself, establish who may legitimately cause it.

APPROVAL ≠ PERPETUAL AUTHORITY

Authority established at T1 must still hold under the governing state that exists at the point of effectuation.

GOVERNANCE LAW

PERMISSION TO **KNOW** DOES NOT, BY ITSELF, ESTABLISH AUTHORITY TO **ACT**.
A **DECISION** TO **ACT** DOES NOT, BY ITSELF, ESTABLISH AUTHORITY TO **EXECUTE**.
